Network Monitoring, Management and Automation

Network Documentation

and

Netdot
npNOG 5

Dec 8 - 12, 2019

Have you ever asked,
"How do you keep track of
it all?"

Document,
Document,
Document!

Documentation

Basics, such as documenting your switches...

- What is each port connected to?
- Can be simple text file with one line for every port in a switch:
  - switch1, port 1, Room 29 - Director's office
  - switch1, port 2, Room 43 - Receptionist
  - switch1, port 3, Room 100 - Classroom
  - ...
  - switch1, port 25, uplink to backbone
- This information might be available to your network staff, help desk staff, via a wiki, software interface, etc.
- Remember to label your ports!

Documentation (Contd.)

Maybe this process should be automatic. Tools to help automate network documentation are something to consider.

- You can write local scripts (programs) to do this.
- Consider among several automated documenation systems for networks.
- You'll probably end up using and doing both.

Documentation: Labelling

Nice... :)

Problems With Documentation

In most cases:

- Lack of clear procedures and methods
- Dispersion
- Lack of structure
- Lack of correlation
- Lack of tools... or, too many tools
- Lack of time and human resources

Requirements for a Tool

- Open standards based
- Generic and flexible
- That uses a relational database
- Automates tasks
- Exports configurations
- Web and command-line interfaces (CLI)
- Authentication and authorization
- Reports
- Open source code
- Application programming interface (API)

{net.} NETwork DOcumentation Tool

- Started in 2002. Required by the University of Oregon Network Services and NERO (http://www.nero.net)
- Nothing equivalent available as Open Source
- Started as something much simpler
- Ccentralizing and correlating information is critical:
  - Topology
  - Cable plant
  - IP and Mac addresses
  - DNS, DHCP, etc.

{net.} Design Goals

- Reutilize components (don't reinvent the wheel)
  - There are Open Source packages that help to resolve many Network Management problems.
- Independent of the RDBMS using abstraction (http://www.masonhq.com)
  - MySQL, Postgres, etc.
- Use of Object Relations Mapper tools (ORM)
- Minimize the number of programming languages.
  - Perl and Javascript
- Low impact graphical interface.

{net.} Functionality

Core functionality includes:

- Discovery of network interfaces via SNMP
- Layer 2 topology discovery and graphics using:
  - CDP/LLDP
  - Spanning Tree protocol
  - Switches forwarding tables
  - Router point-to-point subnets
- IPv4 and IPv6 address management (IPAM)
  - Address space visualization
  - DNS and DHCP configuration managment
  - IP and Mac address correlation

{net.} Functionality (Contd.)

- Cable plants (sites, fibre, copper, closes, circuits)
- Contacts (departments, providers, vendors, etc.)
- Exports for tools like Nagios, Sysmon, RANCID, Cacti, etc.
  - For example, automate Cacti configuration
  - I.E., how to automate node creation in Cacti
- User access-level: admin, operator, user
- Ability to draw pretty pictures of your network.

Management	Contacts	Cable Plant	Advanced	Reports	Export	Help
Devices	Assets	VLANs	Address Space	DNS Records	DNS Zones	DHCP

{net.} Architecture

{net.} Network Devices

- Can be added via SNMP (preferred) or manually
- Automatic updates via SNMP
- Manufacturer, model, software version, name and domain, dates
- Maintenance contracts, out of band access, SNMP version and community
- Interfaces, VLANs, IP addresses, BGP peers
  - ARP tables (routers), redirection tables (switches)
- Topology
- Images, comments, change history

{net.} Topology

{net.} uses many sources of topological information:

- CDP and LLDP protocols
- Analyze redirection tables
- Spanning Tree protocol
- Point-to-point networks

Netdot can dynamically draw the topology of a network or a segment of a network.

{net.} IP Space: Addresses and Blocks

- Hierarchical (drill-down) and graphical representation
- Support for IPv4 and IPv6
- Classification in:
  - Block
- Container
- Subnet
- Reserved
  - Address
- Static
- Dynamic
- Reserved

{net.} Visualisation of IP Address Space

© GPL. Netdot: NETwork DOcumentation Tool v.1.0.7

{net.} IP Space: Blocks & Addresses

- Subnets are discovered from router interfaces
- From ARP tables we can know:
  - Addresses in use in each subnet
  - Mapping of IP to MAC
- Information added for blocks (or subnets)
  - Group that uses the block
  - Group that administers the block
  - Percent utilization of addresses (subnet)
  - Percent utilization of sub-divisions (containers)
- Information added for addresses
  - First and and last time seen
  - interface and device
  - Services to monitor with Nagios (HTTP, DNS, SSH, DHCP, Radius, LDAP, etc.)

{net.} Cabling

- Inter-building cabling (backbone)
  - Buildings and closets where cabling starts and stops.
  - Type of fiber, length, quantity of fibers
- Fibers
  - Interconnections (splicing) and sequences
  - Measurements, tests, interfaces, circuits
 - Status

{net.} Cabling (Contd.)

- Intra-building cabling (interior cabling)
  - Closet where it begins
- Level
  - Building
  - Interface (port) where it is connected
  - Outlet where it terminates (id)
- Office number or room
  - Level
- Building

{net.} Cabling (Contd..)

- Physical data
  - Dimensions, number and types of panels, type of ventilation, number of copper pairs, number of racks, etc.
- Cabling that terminates in the closet
  - Fiber and twisted pair
- Photos

{net.} Closet Photo
{net.} Entities

- Branch
- Customer
- Department
- Manufacturer
- Peer (BGP)
- Provider
- Vendor

Contacts

- Based in individuals and roles (Person & Contact)
  - Information by individual
- Contact data
  - Locations, position, telephone, e-mail, beeper
- Roles
  - Administrative contact, technical, etc.
  - Notification schedule and levels
- Contact lists
  - Assigned to different resources
- Devices, subnets, cabling, etc.

Reports

- Devices
  - By category and by product
  - Out-of-date firmware
  - Duplex mismatches
- Most used MAC codes (Manufacturers)
- From the database
  - SQL table utilization reports

Inventory & Devices

Configuration Exports

Information contained within Netdot enables automatic generation of configurations for software packages.

- Monitoring devices and servces
  - Nagios, Sysmon
- Monitoring configurations
  - RANCID
- Traffic analysis
  - Cacti
- Services
 - DNS (Bind)
  - DHCP

Exporting Configuration

Recommendation:

- Netdot updates VCS (Git, Subversion, etc)
- Config mgmt system (Puppet, Chef, etc) distributes configurations, restarts services, etc.

{net.} Alternatives

- IPplan (http://iptrack.sourceforge.net/)
- NetDisco (http://netdisco.org/)
- RackTables (https://www.racktables.org/)
